Tektroniks Wireless DATAcentre

The Wireless DATAcentre is a monitoring and alarm system with a vast array of capabilities in a format that is easy to install and easy to use. With the added benefit of being wireless, installation is minimal with very little disruption to existing structures.

Start monitoring and saving with system prices starting as low as **£872**

- Applications include:
- Haematology
 - Pathology
 - Mortuary
 - Patient Information Storage
 - Catering
 - Retail Refrigeration
 - Humidity Monitoring
 - Energy Consumption Monitoring
 - Refrigerant Leak Detection

The Tektroniks wireless monitoring system can measure just about any environmental factor from temperature through to pressure differential in a room. The wireless sensors can also measure and monitor energy usage, refrigerant leak detection, utilities and plant faults.

- In-built Display**
On-screen display of real time and historical data
- Reports**
HACCP Reports direct to a USB memory stick
- On-board Storage**
Up to 1 Year on-board data storage
- Monitoring**
Energy monitoring capability
- Security**
User accountability with various levels of protection

Hawco EMC³ Systems Cost-effective, Intelligent Energy Management and Control Systems

Ease Of Use The LCD screen allows users to view each sensor reading as well as being able to view all sensor data both in real time and archived in both tabular and graphical form.

Security And Accountability The Wireless DATAcentre offers three user levels each with password protection. This gives accountability for usage/changes made.

Alarms You have full control over the management of the alarm set point for each Wireless Sensor

PC, Web And Remote Access When connected to a PC via the internal Ethernet port the Wireless DATAcentre starts to show its flexibility and capacity.

USB Connect any standard data stick to the system and download directly. Data downloaded can be easily interrogated/used with standard software packages.

- Easy to install
- Easy to use
- Broad range of monitoring applications
- High degree of precision
- Easy access to information
- Secure
- Configurable alarm
- USB connection for data download
- Remote access via PC with standard browser
- Capacity for up to 120 wireless sensors
- Wireless range - transmission distances of up to 1000 metres

Applications include:

Catering
Retail Refrigeration
Humidity Monitoring
Energy Consumption Monitoring
Refrigerant Leak Detection
Haematology
Pathology
Mortuary
Patient Information Storage

Archived Data Data recorded from the Wireless Sensors in a format that meets the food industry HACCP legislation, we also offer services that cover legislation for other industries.

Capacity Read information from up to 120 Wireless Sensors. The Wireless DATAcentre system can be tailored to your exact requirement ensuring that you only buy what you need.
