*High-performance condensing unit reduces operating costs for a wide range of applications ...*

## **HAWCO PROVIDES ENERGY-EFFICIENT CONDENSING SOLUTION**

Surrey, U.K. (January 26, 2009) — Hawco, an international controls and refrigeration engineering service provider and distributor, offers a refrigeration solution that combines high performance and energy-efficiency to provide a solution that reduces operating costs. Designated the Hawco Extra Cold, the rugged condensing unit incorporates energy-efficient hermetic compressors and condenser coils with an energy-efficient Zeil-EBM fan. The Hawco Extra Cold unit is available for R404a refrigerant across high, medium and low temperature ranges. Ideal for a wide range of applications, the Hawco Extra Cold unit can be directly balanced with Lu-Ve Contardo SHC and SHA evaporators.

Hawco engineers can customise a condensing unit to meet customer specifications. Available from stock in versions ranging from 1.5kW to 18kW, special models can be ordered up to 28kW. All units can be controlled with Hawco's broad line of control panels and controllers.

Hawco Extra Cold condensing units are fabricated from galvanised steel to ensure a rugged, weatherproof module that can be flat roof, wall or ground mounted. The heavy-duty housing allows for easy installation and maintenance, as well as providing a low operating noise level, ranging from 33dBA to 47dBA.
